

## IELTS Writing Task Task - 1

You should spend about **20** minutes on this task.

The diagram below shows the manufacturing process for making sugar from sugar cane.

**Summarise the information by selecting and reporting the main features, and make comparisons where relevant.**

Write at least **150** words.

## IELTS Writing Task

### Task - 1

#### Band 7:

The diagram illustrates the process of producing sugar from sugar cane. Overall, sugar production involves seven stages, beginning with the cultivation of sugar cane and ending with the drying and cooling of sugar crystals. The process is linear, with each stage leading directly to the next one.

Initially, sugar cane is grown for a period of 12 to 18 months until it reaches maturity. Once the crop is ready, it is harvested either manually by workers using cutting tools or mechanically with the help of harvesting machines.

Following harvesting, the sugar cane is crushed in a mill to extract the juice. The extracted liquid is then purified by passing it through a limestone filter. After that, the purified juice is heated in an evaporator, where water is removed and the liquid thickens into syrup.

In the next stage, the syrup is placed in a centrifuge, which separates sugar crystals from the remaining liquid. Finally, the sugar crystals are dried and cooled, resulting in the finished sugar product.

#### Why is this Band 7?

- Clear overview
- All stages described
- Good organization
- Appropriate vocabulary
- Limited variety of sentence structures
- Fewer advanced linking devices

#### How to Reach Band 8

- Use more sophisticated vocabulary.
- Include passive structures naturally.
- Improve sentence complexity.
- Use a wider range of cohesive devices.

# IELTS Writing Task

## Task - 1

### Band 8:

The diagram outlines how sugar is manufactured from sugar cane through a series of seven distinct stages. Overall, the process is a straightforward linear procedure that starts with the cultivation of sugar cane and culminates in the production of refined sugar crystals. Harvesting can be carried out either manually or mechanically before the cane undergoes several processing stages.

At the first stage, sugar cane is cultivated over a period of approximately 12 to 18 months. Once mature, the crop is harvested either by workers cutting the stalks by hand or by machinery designed specifically for this purpose.

The harvested cane is subsequently crushed to extract its juice. This liquid is then purified using a limestone filter to remove impurities. After purification, the juice is transferred to an evaporator, where heat is applied to eliminate excess water, causing the liquid to thicken and form syrup.

Thereafter, the syrup is processed in a centrifuge, which separates sugar crystals from the remaining syrup. In the final stage, these crystals are dried and cooled before becoming the finished sugar product ready for consumption.

### Why is this Band 8?

- Strong overview
- Excellent sequencing
- Wider vocabulary range
- Accurate passive voice
- Better grammatical variety
- Could contain more precise and sophisticated phrasing

### How to Reach Band 9

- Use highly precise process vocabulary.
- Demonstrate greater grammatical flexibility.
- Use advanced cohesion naturally.
- Maintain complete accuracy throughout.

## IELTS Writing Task

### Task - 1

#### Band 9:

The diagram depicts the production of sugar from sugar cane, illustrating a seven-stage process that transforms harvested cane into refined sugar crystals. Overall, sugar manufacture follows a clearly defined linear sequence, commencing with the cultivation of sugar cane and concluding with the drying and cooling of crystallised sugar. Notably, the harvesting stage can be completed either manually or with the aid of specialised machinery before the raw material undergoes further refinement.

The process begins with the cultivation of sugar cane, which requires approximately 12 to 18 months to reach full maturity. Once the crop is ready for processing, it is harvested either by workers cutting the stalks manually or by mechanical harvesters. The collected cane is then fed into a crushing machine, where juice is extracted from the plant material.

Subsequently, the extracted juice is purified through a limestone filtration system designed to remove unwanted impurities. The clarified liquid is then heated in an evaporator, allowing excess moisture to be removed and the liquid to concentrate into a thick syrup.

In the penultimate stage, the syrup is transferred to a centrifuge, where centrifugal force separates sugar crystals from the residual liquid. Finally, the crystals undergo a drying and cooling process, producing refined sugar that is ready for distribution and consumption.

#### Why is this Band 9?

- Clear and comprehensive overview
- Fully developed process description
- Excellent lexical resource
- Sophisticated process vocabulary
- Wide range of grammar structures
- Accurate passive constructions
- Perfect cohesion and coherence
- No grammatical errors

## IELTS Writing Task Task - 1

You should spend about 20 minutes on this task.

The pie chart gives information on UAE government spending in 2000. The total budget was AED 315 billion.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

## IELTS Writing Task

### Task - 1

#### Band 7 Sample Answer

The pie chart illustrates how the UAE government allocated its total budget of AED 315 billion in the year 2000 across various sectors. Overall, social security received by far the largest proportion of government spending, while transport accounted for the smallest share. Health and personal social services, as well as education, also received significant amounts of funding.

In detail, social security was the biggest expenditure category, at AED 100 billion, representing almost one-third of the total budget. Health and personal social services received AED 53 billion, making it the second-largest area of spending. Education accounted for AED 38 billion, while law and order was allocated AED 17 billion.

Regarding other sectors, defence received AED 22 billion. Spending on debt interest and other expenditure was identical, with both categories receiving AED 23 billion. Housing, heritage and environment accounted for AED 15 billion, whereas industry, agriculture and employment received AED 13 billion. Finally, transport was allocated the least amount of money, at only AED 9 billion.

In summary, the UAE government prioritized social welfare, healthcare, and education over sectors such as transport and industry.

#### Why is this Band 7?

- Clear overview included
- Main features identified
- Accurate data comparisons
- Good organization
- Vocabulary is not highly sophisticated
- Sentence structures are somewhat repetitive
- Comparisons could be more analytical

#### How to Reach Band 8

- Use more advanced vocabulary.
- Include more complex sentence structures.
- Make stronger comparisons between categories.
- Avoid repetitive phrases.

#### Band 8 Sample Answer

The pie chart provides information about how the UAE government distributed its AED 315 billion budget among different sectors in 2000. Overall, social security represented the largest share of government expenditure by a considerable margin, whereas transport received the smallest allocation. Healthcare, education, and social services also accounted for substantial portions of the budget.

## IELTS Writing Task

### Task - 1

Looking first at the largest categories, social security received AED 100 billion, which was almost twice as much as the amount allocated to health and personal social services (AED 53 billion). Education was the third-largest expenditure item, at AED 38 billion.

Turning to the remaining sectors, defence was allocated AED 22 billion. Spending on debt interest and other expenditure was equal, with each category receiving AED 23 billion. Housing, heritage and environment accounted for AED 15 billion, while industry, agriculture and employment received AED 13 billion. At the opposite end of the scale, transport received only AED 9 billion, making it the smallest budget category.

Overall, government spending was heavily concentrated on social welfare-related sectors, while considerably less money was directed towards transport and economic development.

## IELTS Writing Task

### Task - 1

#### Why is this Band 8?

- Strong overview
- Well-developed comparisons
- Wide range of vocabulary
- Good grammatical variety
- Clear logical progression
- Could be even more analytical
- Lexical sophistication can be slightly higher

#### How to Reach Band 9

- Use more precise comparative language.
- Group data more effectively.
- Employ highly natural academic phrasing.
- Demonstrate greater lexical flexibility.

#### Band 9 Sample Answer

The pie chart illustrates the distribution of the UAE government's AED 315 billion budget across nine expenditure sectors in 2000. Overall, social security dominated government spending, accounting for by far the largest proportion of the budget. By contrast, transport received the smallest allocation. It is also evident that social welfare, healthcare, and education collectively absorbed a substantial share of total public expenditure.

In terms of major spending categories, social security received AED 100 billion, making it the most heavily funded sector and almost double the allocation for health and personal social services, which stood at AED 53 billion. Education ranked third, attracting AED 38 billion.

A second group of sectors received more moderate levels of funding. Defence was allocated AED 22 billion, while debt interest and other expenditure each accounted for AED 23 billion. Meanwhile, housing, heritage and environment received AED 15 billion, slightly exceeding the AED 13 billion allocated to industry, agriculture and employment. At the lower end of the scale, law and order accounted for AED 17 billion, whereas transport attracted only AED 9 billion, the smallest figure among all sectors.

Overall, the figures indicate that the UAE government placed a strong emphasis on social protection and public services, while comparatively less funding was directed towards transport and industrial development.
